Name: Noor
Age: 27
Department: IT
Salary: 5000

Row 2:
Name: Razan
Age: 27
Department: Law
Salary: 4500

Row 3:
Name: Ali
Age: 30
Department: HR
Salary: 4000

Row 4:
AI_Summary: Based on the provided limited data preview:

1) Short Summary
This brief report provides a snapshot of three employees, detailing their names, ages, departments, and salaries. The data indicates diversity across different departments and a range of salaries among the observed individuals. Due to the extremely small sample size, no definitive conclusions or broad trends can be established.

2) Top Findings
*   **Age Distribution:** Two employees are 27 years old (Noor, Razan), and one is 30 years old (Ali).
*   **Departmental Diversity:** Employees are represented in three distinct departments: IT, Law, and HR.
*   **Salary Range:** Salaries range from 4000 (HR) to 5000 (IT).
*   **Potential Department-Salary Correlation (Limited):** The highest salary observed is in the IT department (5000), while the lowest is in HR (4000).

3) Suggested Next Actions
Given the extremely limited data, the primary focus should be on data expansion and verification:
*   **Expand Data Collection:** Gather data for a significantly larger number of employees across all departments to identify meaningful patterns and trends in age, department, and salary.
*   **Analyze Departmental Averages:** Once more data is available, calculate average salaries per department to understand compensation structures more comprehensively.
*   **Investigate Compensation Factors:** With a broader dataset, analyze what factors (e.g., experience, education, role level, department) influence salary to ensure fair and competitive compensation practices.
